

Case Study

A pizza shop wants to have their own application where customer can order the pizza. The application will have the below features.

1. Customer needs to register first.
2. To order the pizza the customer has to login to the application after registration
3. Customer will be able to see the list of pizza available
4. He can choose any one pizza and the order should be placed
5. Customer should be able to see all his past orders.

All the data needs to be stored in the database

Create a console based application for the above problem statement. It should have menu driven code where the menu will be as below.

*****Welcome to Pizza Store*****

0. Exit
1. Login
2. Register

- on Login ask customer to enter the email and password, on successful verification he should be able to see the below menu

*****Welcome to Pizza Store*****

0. Logout
1. Pizza Menu
2. Order a Pizza (Only enter the id of pizza to place order)
3. Order History

- Entities Required
 - Customer
 - Pizza
 - Orders
